## DETAILED ACTION

### *Election/Restrictions*

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-11, and 14, drawn to a method of treating or preventing degenerative disease, classified in class 514, subclass 415.
- II. Claims 12, and 15-17, drawn to a pharmaceutical composition comprising D- or L- tryptophanyl ester or its N-acyl derivatives, classified in class 514, subclass 415.

The inventions are distinct, each from the other because of the following reasons:

Inventions II and I are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the method of treating degenerative disease as claimed can be practiced with another materially different product such as ACE inhibitors for cardiovascular diseases; tacrine for Alzheimer's disease.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Claims 1-12, and 14 are generic to a plurality of disclosed patentably distinct species comprising degenerative and/or cancer diseases routinely treated differently in the art. For example, Alzheimer's disease can be treated with an acetylcholine esterase inhibitor such as tacrine; Parkinson's disease can be treated with e.g., carbidopa/levodopa; cardiovascular diseases can be treated with e.g., ACE inhibitors, beta-blockers, and HMG-CoA reductase inhibitors. These agents do not work interchangeably, i.e., e.g., tacrine cannot treat Parkinson's diseases, and HMG-CoA reductase inhibitors cannot treat Alzheimer's disease. Due to the very different nature, pathology, and consequently different treatment modalities for each disease, the search field for each disease states encompassed by the claims differs and the search for all the species would impose an undue burden to the Office. Applicant is required under 35 U.S.C. 121 to elect a single disclosed species of disease or disorder e.g., colon carcinoma or myocardial infarction, even though this requirement is traversed.

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

A telephone call was made to Ms. Margaret Perry on June 27, 2001 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
